

# Manila to WordPress Site Conversion

by Weblogger/Erin Clerico  
REV: August 23, 2009

**Success!** All old Manila posts, pages, images and Gems (files) converted and placed in to your new WordPress (WP) site. Any old internal Manila links, on every new WP page, will be converted to their new WP URL. All old images uploaded to your Manila site now link directly from their new WP URLs. Pages containing links to old Gems urls link to new WP URLs. All Manila theme modules and includeMessage macros converted.

Manila comments and comment threads are optionally rendered to an archive of static files. CSS hooks built-in for formatting.

perfect toast every time!  
\* not really, but we're trying
